Built-in workflow engine for transparent control of technical processes

Transcode multimedia content

Use of descriptors and folders to organize content

Contributor-management to reduce multiple entries

Truly built with web technology for access on desktops and tablets
dira! Medox

Multimedia Content Management System

The audio lies in the database, texts are saved somewhere as word documents, pictures and videos are buried in folders - that is everyday life for media enterprises working with multimedia content. dira! Medox, the new content management system by SCISYS, supports all media types: audio, video, image and texts can be stored in one place and can be found in the blink of an eye with our integrated search engine. Furthermore you can easily edit metadata and compile your content into multimedia stories.

Working with multimedia content has never been more convenient!

One Portal – all the Applications!
New Challenges, New Organisation

With the upcoming of multimedia radio databases that used to be a place to store audio are a playground for more types of media and all sorts of cross media combinations. dira! Medox accomplishes this challenge with a new organisation system that allows all of those combinations. Videos or pictures can appear as main items now and stories can contain multimedia content.

The new web-based single-track audio editor allows journalists to work on the go and on platforms which haven’t been supported before.

Another novelty is the contributor system - a new intuitive catalogue for persons, groups, and organisations that reduces multiple entries and supports multimedia workflows like visual illustration of audio content (for DAB+, internet etc.).

Multimedia-Talent

Besides storing all your media assets, dira! Medox also brings the trusted dira! database functionalities to another level. It will be possible to prelisten audio, view pictures and video and access the metadata directly in the interface.

Furthermore you will be able to edit audio, video, pictures and documents with integrated editing tools – even to cross media productions.

These innovations are the foundation our new combined full-text search lies upon. With multimedia items and the new persona model, it is easier to find what you’re looking for. Additionally, with a variety of filter options, a more detailed search is now possible.
Everything! Anytime! Anywhere!

The philosophy of the new dira! generation promises much more freedom for your working space.

The system architecture allows operating not only on-premise, but also in common cloud-environments.

dira! Medox is the perfect multimedia addition to your dira! system, but also a great standalone solution.
